

SVS GROUP

Innovating
Infrastructure Solutions

SVS GROUP

The SVS group from 1988 is known to be amongst the prominent manufacturers and service providers of an extensive range of government projects. Our group founder Mr. Sunil Surana has a vast experience of over 35 years in diverse industrial applications such as V Belt Manufacturing (Rubber Industry), HDPE Water Tanks, Pressed Steel Overhead Water Tanks, M.S. Pipelines, Automatic Outflow Regulating Dam Gates, Vertical Lift Dam Gates, Radial Dam Gates and Heavy Machinery Manufacturing. Over the years the group has entered new streams like Water Supply Schemes, Civil Dams, Barrages, Anicuts, Municipal Solid Waste Management Plants and Pre Engineered Buildings. The latest feather in our cap is the introduction of IT products & systems

like water level sensor installations and flow meter systems at dams and canals in various government departments.

We are capable of designing and applying vast structures with all depth analysis and quality checks for best project delivery to the customer. We have also gained good credibility because of the large scale infrastructure projects that we have done for government departments.

We have been expanding in the recent times, with two heavy steel fabrication units at Indore and Raipur. Our latest acquisition of machineries include CNC cutting machine, Automated MIG Welding Machines and Shot Blasting Machines.

Sunil Vimalchand Surana

Our group founder Mr. Sunil Surana has a vast experience of over 35 years in diverse industrial applications such as V Belt Manufacturing (Rubber Industry), HDPE Water Tanks, Pressed Steel Overhead Water Tanks, M.S. Pipelines, Automatic Outflow Regulating Dam Gates, Vertical Lift Dam Gates, Radial Dam Gates and Heavy Machinery Manufacturing. He is a man of principles and believes in conducting business practices ethically. He is a smart individual who foresees the future & the demands that business trends promise.

Milestones

Why us?

State of the art machinery

Our manufacturing units have the latest high tech machinery. We have invested heavily in market leading machinery & equipment providing us with quality assured processes and manufacturing capability.

Customer centric approach

'Client comes first'

We gained good credibility because of our excellent customer service. We approach our work with a sense of ownership and embrace honesty, boldness and excellence every day. Our client comes first in everything we do.

Customized, improvised solutions

We customize and improvise solutions that suit our clients' needs. We assess the precise requirement of our clients and stretch our boundaries out of our domain expertise to serve them. We believe in flexible mode of working and truly give our clients' the top priority.

Credibility

We gain credibility by adhering to our commitments, displaying honesty and integrity and reaching company goals solely through honourable conduct. Honesty and integrity are values we hold as key principles in our business. Also, our services include timely maintenance of engineering equipment to reduce client's downtime.

Cost efficiency

We continuously work on improving our processes resulting in substantial cost efficiencies for our customers. Once switched to steady operations mode we continuously monitor and improve processes to identify new areas for improvement.

Products and Services

1 Hydro Control Gates

It's a specialised engineering discipline; one that requires a unique combination of engineering expertise, familiarity and experience. Our engineering design experts have an unmatched depth of perfection. Hydro control Gates can be categorized as the following:

- Automatic Outflow Regulating Gate
- Vertical Lift Gates
- Radial Gates

2 Dams & Barrages

We've been engaged in the study, design and construction of major dams and barrages and have undertaken dam projects covering all forms of dam construction to maintain flow of river, for diverting water to canal for irrigation or for generating electricity.

3 Water Supply Schemes

Water supply schemes are complex integrated systems developed for taking water from existing river or other sources, filtering and delivering it to the overhead tanks and then distributing it to the households 24x7.

4 Pre-Engineered Buildings

Pre Engineered Buildings are the newest trend in the industrial as well as commercial spaces. We deliver quality Pre Engineered Buildings catering to all major market segments.

5 Municipal Solid Waste Management

We specialise in end to end Municipal Solid Waste solutions for waste management. We provide custom based solutions depending on the nature of the waste, location, use of end products and technological applicability.

6 Smart IT Systems

Our Smart IT systems include bespoke water level monitors that provide real-time information about water-level and storage in reservoir over cloud, barrage gate automation devices that can be adapted providing local and remote operations for barrage gates. We also design smart dustbins to compress the garbage to allow less frequent garbage collection and Valve automation system to allow automated and manual operation of valves at Water Treatment plants and overhead tanks.

Team

We have garnered the best talent in the industry to build an enterprise that surpasses the ordinary. The combined experience of our people from diverse backgrounds has resulted in the creation of a superior intellectual capital that forms the building block of our success. Over the years, the persistent efforts of our people have shaped our reputation as a reliable entity in a competitive marketplace.

Machinery

SVS Group being an extremely dynamic company believes that latest and efficient machineries are a pre-requisite for any company to excel in the infrastructural sector. We have the

most upgraded machineries and latest technology in the market. Along with up gradation, we have been constantly expanding our production capacity, thus staying ahead of competitors and offering quantity along with quality.
